DynaLink Communications, a national switchless CLEC, announced Wednesday the completion of its new 30,000 square-foot office located at 927 McDonald Ave. in Brooklyn, N.Y.

The free-standing, three-story structure has been in construction for two years and will house DynaLink's back-office support group along with additional sales offices. Some space has been earmarked for a future colocation facility. DynaLink will continue to operate parts of its sales and billing departments at its current Manhattan office located on West 17th Street.

"While many businesses have continued to suffer within today's economic climate, our operations have never been stronger including 30 percent year-over-year growth last year and a 1,900 percent increase since signing our first customer five years ago," said Larry Fishelson, co-founder and COO of DynaLink. "As such, we continue to invest heavily in building our infrastructure, including the addition of these new facilities, and seek the best and the brightest talent to assist in growing our operations."
